EDRM 878 Collaboration Project

Let's begin to create a repository of sample scripts for common statistical procedures. This will give us a chance to each work on separate scripts that we add to the repository. We can also look at each other's scripts and "clean them up" to see how we can track changes, go back in time, and use all the useful features of Git.

For each of these, do graphs, descriptive statistics, and inferential statistics

Adam – Multiple groups in a multivariate setting

Dawn – One-sample quantitative

Brad – Two-sample quantitative variable

Sun – One-sample categorical

Ginger – K-sample quantitative

Adam – Two quantitative

Mike – Two-sample categorical
